

## ABSTRACT

5 A flexible laminate, comprising: the light-active second layer acts without  
external energizing to change the properties of incident light such that the light  
reflected by this layer has [signalling] signaling properties; a first layer serving as  
carrier layer; a light-active second layer situated on an outer surface of this laminate;  
and a permanent magnetic third layer for releasable magnetic attachment of the  
laminate to a ferromagnetic surface. The laminate has the feature that the light-active  
second layer acts without external energizing to change the properties of incident light  
10 such that the light reflected by this layer has [signalling] signaling properties.
